Fast Ethernet and PoE over Multi-Pair UTP with up to 2,000ft (610m) Reach

FLEX-Base Extender Solution

The NVT Phybridge FLEX-Base Extender Solution is designed to supercharge the downlink ports of a standard Ethernet switch delivering 10/100Mbps symmetrical (full duplex) and PoE over Multi-Pair UTP infrastructure with distances up to 2,000ft (610m). **That's 6X the reach of standard Ethernet switches**, thus removing the costs and disruptions associated with multiple IDF closet requirements.
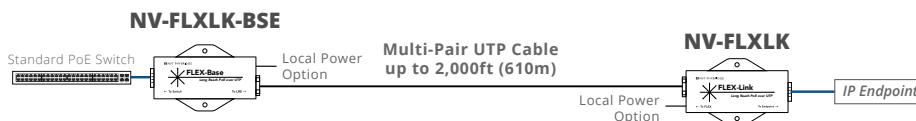

With the FLEX-Base Extender Solution, IP IoT devices can be connected to the existing Multi-Pair UTP cabling infrastructure, delivering optimal performance while saving cost, time, and environmental e-waste. Furthermore, the cost savings realized by using the FLEX Extender Solution can enable system designers to transfer budget and resources towards higher-quality applications and IEEE-compliant IoT devices, including IP-enabled phones, cameras, access control, speakers and even facility lighting.
